* Photoshop Elements, available as part of the Photoshop collection, has even more features than Photoshop, and it is easier to learn. * Photoshop has more specialized tools for things such as retouching, compositing, vector illustration, and video editing. * Photoshop's layer-based editing system enables you to stack layers of images on top of each other and then manipulate them in one place at a time, without having to worry about the relative order. This is the most powerful feature in Photoshop and much more efficient than working with layers in other programs. # Redistributing the Photoshop Collection If you bought the Photoshop collection, you can download the individual programs from [Adobe.com/creativity](https://adobe.com/creativity). If you want to use the individual elements of Photoshop, such as just the photo editor, you can download that edition from [Adobe.com/creativity/photoshop](https://adobe.com/creativity/photoshop). You can also get a Photoshop Elements package from [Adobe.com/creativity/elements](https://adobe.com/creativity/elements) or as part of an individual product from [Adobe.com/creativity/elements](https://adobe.com/creativity/elements). Use the free download Adobe Photoshop Elements, which gives you both the capabilities of the Photoshop Elements and Photoshop families. The other editions come with one of these programs. If you bought a program other than the Photoshop collection, such as Photoshop 7, Photoshop Elements, or Photoshop Lightroom, you can download it from [Adobe.com/creativity/photoshop](https://adobe.com/creativity/photoshop). ## Understanding the Learning Curve As you use Photoshop for more editing and retouching tasks, you need to become more proficient with it. This is because your use of the program increases, and the less you have to look up things, the better. The learning curve is a progression of questions you ask yourself as you learn to use the program. You don't have to master the program in one sitting. You can get up to speed incrementally and discover more as you learn. To help you with your learning, follow this list as you progress through the book:

Q: How can I improve the first-person perspective of this map? I'm very new to map making and game design. This is a map I made with Photoshop and Unity3D but it isn't looking very polished and it makes me feel like I don't have a good grasp of level design. How can I make the map look better? Here are some pictures to give you an idea of how it looks now. I'm working on a different version that will have more detail and more quests to add, so I'm not sure if this is possible to do in Unity3D. A: The camera might not be quite what you want it to be. I don't know enough about Unity to tell you exactly what's wrong, but I think the reason why the close-ups are not drawn in the right order on the left hand side might have something to do with it. Also, with the scene itself, it looks like you have a lot of dark, empty space on the right hand side. I'm not sure what kind of lighting you have or how it's set up, but it might be easiest if you adjust the camera so that it is a bit lower than you have it here and a bit closer to the middle of the map. The camera can be set in Unity3D under: 3D -> Camera -> Field of View Also, with the camera, there can be a tradeoff between how much the camera is zoomed out and how close it is to what's in the scene. I don't know exactly which values you can set at the top of the camera settings, but it might be worth it to set the camera to about mid-range and see if you can't get it to look better this way. Finally, you could consider editing the map in Photoshop, rather than Unity. Q: How to get the current selected index in ListView in Android I want to get the current selected index of a ListView. I tried: list.getSelectedItemId() But it returns me -1 and 0 even when the list is not selected. What is the best way to get the selected index? A: As you specified this question is related to Android programming using Java, ListView is only part of a complicated architecture and only one among other components interacting with one another. All the more it is necessary to separate the selection

Image caption An example for what I'm talking about... A really boring paper has been published on the relationship between memory and the brain. I can't put my finger on it but when something is really boring (often a paper, but not always) I'll say: "Oh, yes - now I know why I find that paper boring". It happened when I read a paper published in the June issue of Psychonomic Bulletin and Review. The title is: "Medial temporal lobe and working memory for spatial location". I know that spatial location is what we call encoding locations. It's the kind of thing I do on maps. Image caption One of the tasks used in the experiment But what really gave me the clue was the fact that the paper was not just about encoding spatial location. It was about encoding and retrieving spatial location. I liked reading about the encoding because it showed how memory is a dynamic thing. It can change over time. But encoding is one of the easier things to do (at least in my experience). When I do it, I often try to think of places that are more familiar and that seem more distant from the place I'm encoding. For example, I used to live in a flat on the outskirts of Barcelona. My memory of that flat was that it was a rather small and dark place - just one room with a small kitchen and a tiny bathroom. But since I've gone to live in the UK, in what I'll call Brighton, my memory of that place has started to change - I now see it as much larger and brighter than it was before. It's not something that happens very often. But I have no doubt that it's true. The study that I read about in the paper from 2016 didn't help me at all. A group of subjects was asked to recall spatial locations in order to pinpoint the position of two adjacent rooms. First, a map of the building was presented on the screen and the subject was asked to place a marker at any location where they had been when they had visited the building. A second map, showing the building in its current state, was then presented, and the experimenter pointed out which locations on this second map matched the locations of the marked locations on the first map. Consequently, the subject was able
